

CORELLI STRINGS

These synthetic gut strings, made by Savarez, are well respected by players and teachers throughout the world. **Corelli Alliance** strings feature the unique Corelli KF core material which combines durability with exceptional tone qualities. The sound is brilliant, rich and complex. They offer quick response, easy playing, great power and projection of sound, tuning stability and are not affected by changes in climate.

Corelli Crystal strings have a Stabilon (Perlon) core and are aluminium and silver wound. Their warm sound can often bring out the best in student instruments. They also offer improved response, easier transition between strings and increased projection. The composition of the strings also gives them a longer playing life.
